

## **COUNT ON FIRETRACE INTERNATIONAL'S AUTOMATIC FIRE SUPPRESSION SYSTEMS TO PROTECT YOUR CNC MACHINES**

- Flexible routing and tubing installation
- Detects and suppresses fire 10x faster than traditional methods
- 24/7 uninterrupted service
- No electricity required
- Clean agents are safe for people and leave no residue
- Does not interfere with machine operation or maintenance

### **About Firetrace International**

Firetrace International is a leader in special hazard fire protection. Safeguarding your critical equipment and machines to micro-environments and large facilities.

We protect your assets through our automatic fire suppression systems using clean agents to leave no residue and minimize downtime.

## Direct Release Systems

Direct Release System, the tubing nearest the hottest point of the fire ruptures, forming an effective discharge “nozzle.” The agent contained in the cylinder is then released in the immediate proximity of the fire.

## Indirect Release Systems

Indirect Release System, the Firetrace tubing is used only for detection. When a fire causes the tubing to burst, a valve opens and the suppressant is discharged via a traditional distribution network and fixed nozzles.

## Firetrace Detection Tubing

Firetrace Detection Tubing is ideal for fast, reliable detection of heat and flame even in the toughest applications.
